

Task API 1.0 OAS 3.1

/openapi.json

A small CRUD API that manages a to-do list of tasks.

Data lives in memory only — restart the server and it resets to the 3 seed tasks. (Week 3 replaces this with a real database.)

Try every endpoint live at [/docs](#).

meta

GET / API description

GET /health Health check

GET /stats Task statistics

POST /reset Reset tasks to seed data

tasks

GET /tasks List all tasks (with optional filters)

POST /tasks Create a new task

GET /tasks/{task_id} Get one task by id

PUT /tasks/{task_id} Update an existing task

DELETE /tasks/{task_id} Delete a task

Schemas

HTTPValidationError > Expand all **object**

TaskCreate > Expand all **object**

TaskUpdate > Expand all **object**

ValidationError > Expand all **object**
